

## Book Recommendation: “The Principles of Geotourism” (Hard Copy)

Editor: Anze Chen, Yunting Lu, Young Ng

Language: English

No. of pages: 661

Publisher: Springer

Size : 18 cm x 24 cm x 2 cm

Springer, the world-renowned earth science book publisher has recently released “The Principles of Geotourism” which is the English version of the Chinese edition of ‘The Principles of Tourism Earth-science’ first published in 1989.

The original Chinese edition is edited by Professor Anze Chen, the father of Chinese Geoparks, together with Professor Yunting Lu, the late vice president of Academy of Tourism Earth-science and Geopark Research, Geological Society of China. It is a milestone of geotourism and geoparks development in China as it is the first publication available in the mainland providing theoretical and practical basis for related academia and practitioners. The book originally contains nine chapters. Two new chapters on geoparks and prospects of geotourism and geoparks are subsequently added to address their rapid development in the country.

China has the largest number of geoparks in the world. To facilitate overseas readers to gain a better understanding of the unique Chinese geoparks development model and its potential impacts on the global geoparks movement, as well as to promote geotourism and geoparks, our Chairman, Dr. Young Ng edited the English version providing initiators, planners, managers of geoparks and geotourism, teachers and students of geology, geography and sustainable tourism an excellent reference book.

**Subscription to “The Principles of Geotourism” Hard Copy** is now available from AGHK:

Original Price: RMB268

Super Special Price: AGHK member – HKD100; non-AGHK member - HKD150
