1970 - Dec. Lei 9/70: **Basic Law for the creation of National Parks and other types of reserves** (Integral, Natural, Landscape, Touristic, Botanical, Zoological, Geological)

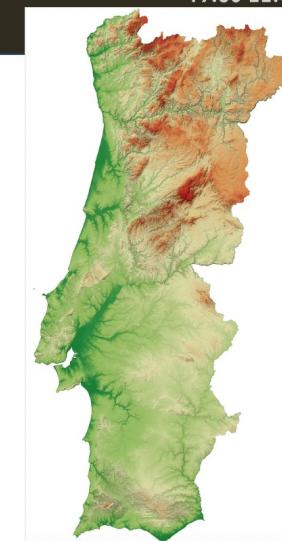

1971 - Creation of the National Environment Commission and the **Peneda-Gerês National Park** (an initiative to commemorate the 1970 European Year of Nature Conservation); a Reserve was also created in the entire area of the Selvagens Islands and the Botanical Reserve of the Medos National Forest

1987 - Basic Law of the Environment (creation of Protected Areas of regional, local and particular scope);

1990 - Creation of the Ministry of Environment and Natural Resources;

1993 - Dec. Lei 19/93 : Protected Areas of national, regional, local and private scope;

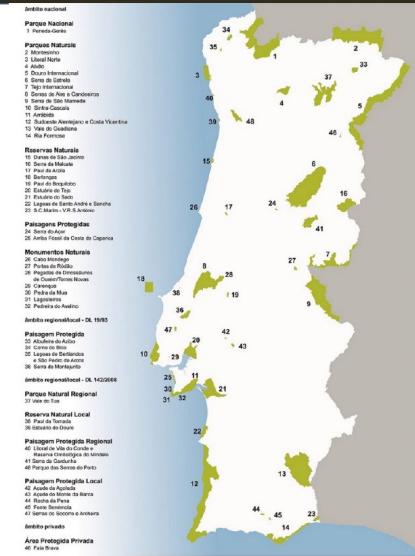

1993 - Creation of the Institute for Nature Conservation (ICN) and the Institute for Environmental Promotion (IPAMB); - Today **ICNF (Institute for Nature Conservation and Forests)** and APA (Portuguese Environment Agency)

2008 – DL 142/08 (current nature conservation regime in Portugal)

RNAP - National Network of Protected Areas

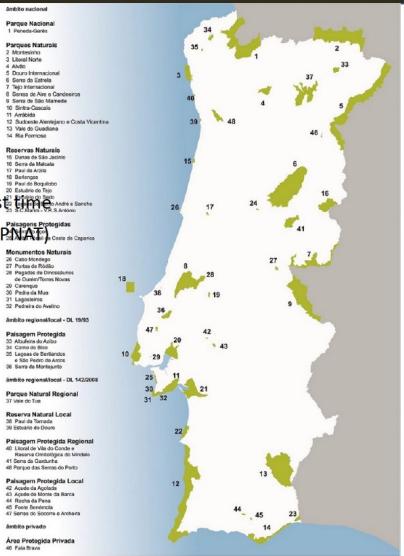

- covers about 8% of Portugal mainland
- only 8 PAs of national level classified because of their geological value
- however, almost all PAs have important geological and geomorphological features

2008 – DL 142/08 (current nature conservation regime in Portugal)

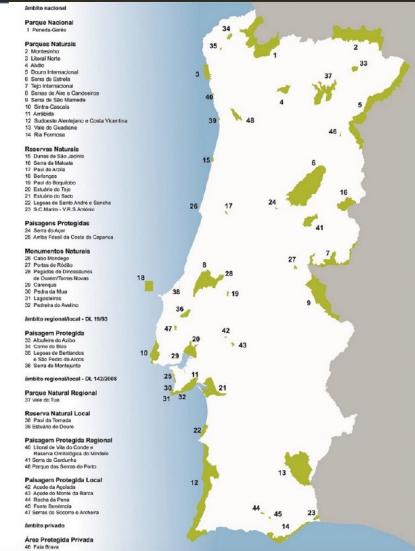

- Recognises geological heritage and geosites for the first time
- Establishes the Natural Heritage Information System (SIPNAT)
- Protected areas of national, regional or local levels
- 5 typologies

- a) National park
- b) Natural park
- c) Nature reserve
- d) Protected landscape
- e) Natural monument

Natural Monuments

CARENQUE: Belas, Sintra
LAGOSTEIROS: Cabo Espichel, Sesimbra

Inventory of geosites of national and international relevance

322 geosites with international or national relevance have
been inventoried in 27 geological frameworks

Geological framework	Main geological theme(s)	Geosites
#01 Neoproterozoic-Cambrian Metasediments in Central-Iberian Zone	Petrology; Stratigraphy	6
#02 Palaeozoic Marbles of the Ossa-Morena Zone	Petrology	7
#03 Ordovician of Central Iberian Zone	Paleontology; Stratigraphy	12
#04 Paleozoic succession of the Barrancos region	Paleontology; Stratigraphy	6
#05 Exotic Terranes of NE Portugal	Petrology; Tectonics	7
#06 Geotraverse of the Portuguese Variscan Fold Belt	Tectonics; Stratigraphy	10
#07 Geology and metallogenesis of Berlão Pyrite Belt	Mineralogy; Petrology	8
#08 Marine Carboniferous of the South Portuguese Zone	Petrology; Stratigraphy	3
#09 Cenozoic Carbonates	Stratigraphy; Petrology	3
#10 Pre-Mesozoic granitoids	Petrology	10
#11 The Iberian NW Metallogenic Province	Mineralogy	4
#12 Gold mineralisation in Northern Portugal	Mineralogy	7
#13 Meso-Cenozoic tectonic evolution of the Western Iberian Margin	Tectonics; Stratigraphy	18
#14 Late Triassic SW Iberian rapture of the Pangea	Stratigraphy; Petrology	4
#15 Jurasico record in the Lusitanian Basin	Stratigraphy; Palaeontology	6
#16 Cretaceous rocks of the Lusitanian Basin	Stratigraphy	3
#17 Dinosaur footprints of western Iberia	Palaeontology	6
#18 Meso-Cenozoic tectonostratigraphy of the Algarve	Stratigraphy; Tectonics	13
#19 Cenozoic evolution of the Western Iberian Margin	Stratigraphy; Palaeontology	4
#20 Glacforms and river network of the Portuguese Berlão Massif	Geomorphology	39
#21 Karst systems of Portugal	Geomorphology; Hydrogeology	38
#22 Active and fossil coastal cliffs	Geomorphology	6
#23 Low coasts	Geomorphology	6
#24 Neotectonics in mainland Portugal	Tectonics; Geomorphology	30
#25 Vestiges of pliocene glaciations	Geomorphology	16
#26 Volcanism of the Azores Archipelago	Volcanism; Geomorphology	30
#27 Volcanism of the Madeira Archipelago	Volcanism; Geomorphology	20

Inventory of geosites of national and international relevance

Inventory of geosites of national and international relevance

Example: Framework 25: Vestiges of Pleistocene glaciations

- 01 (Gorbelas - Junqueira)
- 02 (Vale do Alto Vez)
- 03 (Compadre)
- 04 (Couce)
- 05 (Vale do Homem)
- 06 (Toco-Soutinho)
- 07 (Covão Cimeiro - Cântaro Magro)
- 08 (Covões de Loriga)
- 09 (Lagoa Comprida)
- 10 (Lagoa Seca)
- 11 (Lagoacho - Covão do Urso)
- 12 (Nave de Santo António)
- 13 (Nave Travessa)
- 14 (Pedrice)
- 15 (Salgadeiras)
- 16 (Vale do Zézere)

Example Framework 25: Vestiges of Pleistocene glaciations
Vale do Alto Vez geosite

Challenges

- Next steps for the protection of the inventoried geosites
- Awareness and interpretation of geoheritage
- Recognition of geoheritage in PA's management

Geodiversity, geoheritage and geoconservation strategies in Portugal
